

Ahmed Wagdy Mahmoud

Junior .NET Backend Developer | ASP.NET Core • C# • RESTful APIs

Cairo, Egypt (open to remote/hybrid) | +20 111 596 1312 | wagdy2267@gmail.com | github.com/ahmedwagdy1 | linkedin.com/in/ahmedwagdy

PROFESSIONAL SUMMARY

Junior .NET Backend Developer (ASP.NET Developer) with hands-on experience in C# and ASP.NET Core, specializing in scalable RESTful APIs and MVC applications. Proficient in Onion Architecture, the Repository Pattern, and JWT-based security. Delivered measurable performance gains of up to 30% through query optimization and caching.

Background in Commerce and financial accounting, bringing practical understanding of business and financial systems to backend development work.

TECHNICAL SKILLS

- Programming: C#, JavaScript
- Backend: ASP.NET Core (Web API, MVC), Entity Framework Core, LINQ, AutoMapper
- Security: JWT Authentication, ASP.NET Core Identity, OAuth 2.0
- Architecture: Onion Architecture, Clean Architecture, 3-Tier Architecture, Repository Pattern, Unit of Work, Specification Pattern
- Databases: SQL Server, Redis
- Tools & DevOps: Git, GitHub, Docker, Postman, Azure DevOps, CI/CD basics, xUnit
- Frontend: HTML, CSS, Bootstrap, Tailwind CSS

EXPERIENCE

Backend Development Intern (.NET) | ROUTE — Cairo, Rabaa City

Aug 2024 – Jun 2025

- Completed an intensive .NET backend training program covering the full ASP.NET Core stack, applying concepts directly to a real-world capstone project.
- Delivered a university management system using ASP.NET Core MVC and Entity Framework Core, handling 4+ core modules: student records, courses, enrollment, and grading.
- Organized the codebase around the Repository Pattern and Unit of Work for clean, testable layers, then boosted query performance by up to 30% via LINQ optimization.

PROJECTS

E-Commerce API [\[GitHub\]](#)

- Built a scalable RESTful API using ASP.NET Core 8 and Onion Architecture to support product catalog, cart, and order management.
- Structured data access with a Generic Repository, Unit of Work, and Specification Pattern, keeping every layer modular and unit-testable.
- Locked down all endpoints with JWT authentication and ASP.NET Core Identity, then wired in a signature-verified Stripe webhook for payment processing.
- Cut average API response time by 25% by adding Redis caching and tuning EF Core queries.

Technologies: C#, ASP.NET Core 8, EF Core, AutoMapper, Identity, JWT, Stripe, Redis

Company Management System (MVC) [\[GitHub\]](#)

- Developed a role-based ASP.NET Core MVC application on 3-tier architecture to run day-to-day internal company operations.
- Decoupled data access with the Repository Pattern, Unit of Work, and Specification Pattern, eliminating duplicated query logic across controllers.
- Rolled out ASP.NET Core Identity with authorization split across 3 roles (Admin, Manager, Staff), gating every protected route by permission.

Technologies: C#, ASP.NET Core MVC, EF Core, LINQ, HTML, CSS, OAuth 2.0

Examination Management System [\[GitHub\]](#)

- Designed an end-to-end exam management system with automated grading and instant result generation, built on OOP principles for a modular, maintainable codebase.
- Chose efficient data structures to keep storage and retrieval of student results fast as the dataset scales.

Technologies: C#, Object-Oriented Programming (OOP), Data Structures

EDUCATION

Bachelor of Commerce — Faculty of Commerce, Ain Shams University, Cairo, Egypt

2021 – 2025

- Relevant Coursework: Systems Analysis, Database Management, E-Commerce, MIS, Programming

LANGUAGES

Arabic — Native English — Professional Working Proficiency
